Aftab Husain

Software Engineer | Generative AI & Agentic AI | Node.js | NestJS | TypeScript | AWS
Pune, India | Open to Relocation | +91 95697 21196 | aftab.husain3355@gmail.com | LinkedIn | GitHub

Professional Summary

Software Engineer with 4.5 years of professional experience building production backend systems and Generative AI features using Node.js, NestJS, TypeScript, and AWS. Built and enhanced an AI document verification agent with Amazon Bedrock (Claude) and AWS Textract, using confidence-based auto-approval with human review. Working knowledge of agentic AI, LLM integration, RAG, prompt engineering, LangChain, and LangGraph. Strong backend foundation in REST and GraphQL API design, microservices, database optimization (MySQL, PostgreSQL, MongoDB), and Redis caching, with results including a **33%** reduction in API latency, **60%** lower database load, **40%** higher endpoint throughput, and **25%** lower infrastructure cost via serverless AWS workflows. Experienced with Docker, GitHub Actions CI/CD, feature-flag releases, and New Relic observability in Agile teams.

Technical Skills

Generative AI & Agentic AI: Amazon Bedrock (Claude), LLM Integration, AI Agents, Agentic AI, RAG, Prompt Engineering, Multimodal AI, AI Document Verification (Human-in-the-Loop)
AI Frameworks & Services: LangChain, LangGraph, AWS Textract (OCR)
AI Tools: Claude, Claude Code, Cursor, GitHub Copilot, AI-Assisted Development, Prompt-Driven Debugging & Code Review
Languages: TypeScript, JavaScript (ES6+), SQL, GraphQL, HTML5, CSS3
Backend: Node.js, NestJS, Express.js, REST APIs, GraphQL APIs, Microservices, Serverless, Event-Driven Architecture
Databases & Caching: PostgreSQL, MySQL, MongoDB, SQL Server, Redis, DynamoDB
ORM, Auth & API Docs: TypeORM, Prisma, Mongoose, JWT, Swagger/OpenAPI
Cloud & DevOps: AWS (Lambda, API Gateway, EC2, ECS, ECR, S3, SQS, SNS, DynamoDB, CloudWatch), Docker, GitHub Actions, CI/CD, Linux
Frontend: React.js, Redux, React Native
Observability & Release Safety: New Relic (Dashboards, Distributed Tracing, Alerting), CloudWatch, Statsig Feature Flags, Structured Logging, Audit Trails
Testing & Tools: Jest, Postman, Git, VS Code, IntelliJ, Jira
Practices: Agile Development, Code Reviews, Debugging, Root Cause Analysis, Performance Tuning

Professional Experience

Eternalight Infotech Pvt. Ltd. Pune, MH
Software Engineer (promoted from Junior Software Engineer) *Apr 2024 – Present*

- Engineered and optimized high-traffic REST APIs in Node.js, NestJS, and Express.js, reducing average API latency from 450ms to 300ms (33%) through query tuning, compound indexing, and request-level caching.
- Restructured MySQL and MongoDB schemas using denormalization and compound indexing for microservice endpoints, increasing throughput by 40% and eliminating recurring slow-query alerts in production.
- Designed a Redis-based distributed caching layer for read-heavy services, reducing database load by 60% and absorbing traffic spikes without additional horizontal scaling.
- Replaced always-on processes with event-driven AWS Lambda workflows, cutting infrastructure costs by 25% while keeping workloads responsive.
- Built CI/CD pipelines with GitHub Actions and automated rollback, reducing deployment time from 30 minutes to 8 minutes and lowering release risk.
- Implemented observability with New Relic dashboards, distributed tracing, and alerting across microservices, reducing mean time to detect (MTTD) and accelerating root cause analysis (RCA).
- Integrated Generative AI into production services using Amazon Bedrock (Claude) and AWS Textract, building an AI document verification agent with confidence-based auto-approval and human-in-the-loop review for the Switch platform.
- Owned backend delivery for the Navan and Switch platforms (see Projects), including feature-flag rollouts and compliance controls, working within an Agile team with regular code reviews.

Eternalight Infotech Pvt. Ltd. Pune, MH
Junior Software Engineer *May 2022 – Mar 2024*

- Built scalable Node.js microservices using a modular architecture, and redesigned MongoDB schemas and MySQL queries to achieve consistent sub-100ms data access under production load.
- Integrated Redis caching for high-frequency endpoints, eliminating redundant database calls and improving response consistency.
- Introduced Jest unit tests and peer code reviews, reducing production defect rates.
- Delivered the GoRally booking platform backend (see Projects) across the full release cycle, including QA validation and post-release performance monitoring.

Projects

Switch: Healthcare Staffing | Node.js, PostgreSQL, Redis, AWS (Lambda, SQS, S3), Amazon Bedrock, AWS Textract *Jan 2026 – Presen*

- Enhanced an AI document verification agent using Amazon Bedrock (Claude) and AWS Textract OCR, enabling confidence-based auto-approval with human review for lower-confidence documents.
- Built a rules-based clinician eligibility engine with live data migration, Redis projections, and database drift checks, keeping shift eligibility accurate as source data changed.
- Developed skill assessments and training modules with scoring, retakes, certificates, and expiry tracking; blocked shift access for clinicians with pending requirements.
- Implemented Statsig feature flags, compliance permissions, audit trails, and structured logging to improve release safety and speed up production debugging.

Navan: Trip Management System | NestJS, Redis, AWS (API Gateway, Lambda, ECS, ECR, S3, CloudWatch) *Jan 2024 – Dec 2025*

- Architected a config-driven Navitaire LCC integration framework in NestJS, onboarding IndiGo, SpiceJet, Akasa Air, and Air India Express and reducing new-carrier integration time from months to under one week.
- Standardized booking workflows (availability, pricing, PNR, ancillaries) into shared Node.js modules, reducing engineering effort by 70% and platform incidents by 40% while expanding coverage to major domestic routes.
- Built a GST SEZ compliance engine with automated validation, achieving full tax-compliance coverage; optimized high-traffic APIs with Redis caching, cutting latency by 40%.
- Improved release safety through New Relic distributed tracing, custom alerts, and feature-flag rollouts, contributing to a 25% increase in monthly bookings.

GoRally: Stadium Booking Platform | React.js, NestJS, GraphQL, MySQL, Redis, AWS (S3, EC2) *Jan 2023 – Dec 2023*

- Developed core GraphQL APIs and a slot management engine using NestJS and MySQL, improving booking reliability and supporting concurrent user traffic.
- Collaborated with QA on release validation and monitored API performance to maintain consistent response times under concurrent load.

Education

Indian Institute of Information Technology Kurnool, AP
B.Tech in Electronics & Communication Engineering *2019 – 2023*
